Southern States Adds The Parts And Service Support Of The Existing Installed Base Of Siemens, Siemens-Allis, And Westinghouse Horizontal Interrupter Design Circuit Switchers

Southern States, LLC, the 80-plus year leader in quality, service, and technical support proudly announces the assumption of parts and service support for the existing installed user base of Siemens, Siemens-Allis, and Westinghouse horizontal interrupter design circuit switchers under an exclusive agreement with Siemens Energy & Automation. All customers who have types MFB, CP, CPS, and CPS-VB circuit switchers manufactured by Siemens, Siemens-Allis, and Westinghouse can now acquire replacement parts, upgrade kits, and retrofit kits from Southern States, with each Southern States furnished replacement part, upgrade kit, and replacement kit carrying the same 5 year warranty that covers all Southern States products. Southern States also can provide service support to make your replacement part installation, upgrade kit installation, or retrofit kit installation go quickly and smoothly. Should you chose to do an outright replacement Southern States stands ready to supply our type CSH non-blade model or our type CSH-B integral vertical break blade model circuit switcher, each of which is a physical bolt-for-bolt replacement of the existing Siemens, Siemens-Allis, or Westinghouse unit, requiring no bus height modifications or length modifications and allowing the existing support structure, anchor bolts, and foundations to be reused with a resultant substantial savings in the total cost of an installation upgrade. Turn a 10 kA interrupting capability type MFB circuit switcher into a 20 kA interrupting capability type CSH-B circuit switcher; turn a 16 kA interrupting capability type CP circuit switcher into a 20 kA interrupting capability type CSH circuit switcher, etc.—Southern States has the solution to your installation's needs. Since the first Southern States unit, a type CSH, was finished and shipped in July, 1998, the Southern States CSH and the Southern States CSH-B have demonstrated the same rock-solid performance that users have come to expect and rely upon from all products bearing the proud Southern States name, as witnesses by the rapidly expanding list of users of these newest members of the Southern States product family. And Southern States circuit switcher replacement parts have given a new lease on life to many an old, tired, worn out, overtaxed horizontal interrupter design circuit switcher.

The type CSH and the type CSH-B circuit switchers as well as all horizontal interrupter design circuit switcher replacement parts are produced at Southern States 160,000 square foot facility in Hampton, Georgia by Southern States Power Switching Division, a core group of production, engineering, and management personnel specifically selected to handle this product group and to bring the same high levels of quality and long life reliability to this product line that our customers have grown to expect from all Southern States products.

If you're looking for:

- Superior technical know-how
- Superior product performance and reliability
- An industry leading reputation for quality and service
- Experienced, local representation
- **Spare parts/replacement parts/upgrades/outright replacements for Siemens, Siemens-Allis, or Westinghouse horizontal interrupter design circuit switchers or outright replacement of these circuit switchers**
- **Outright replacement of old circuit switchers from other manufacturers which are no longer parts supported**

Call the Power Switching Division of Southern States. We'll take care of everything else.
