

HSW

High Speed Whip

Southern States Introduces the High Speed Whip.

A high speed whip type air switch attachment used to interrupt transformer magnetizing and line charging current. Can be applied on vertical break and side break switches in both standard and slant style configurations.

FEATURES

- Easy and fast installation and adjustment
- Maximum versatility. It can be mounted on virtually any vertical or side break disconnect switch
- Maintenance free other than periodic inspection
- Maximum reliability. Interruption is independent of switch opening speed

HSW

High Speed Whip

Transformer Magnetizing Current Interrupting Capability *

Voltage (kV)	MVA
15.5 - 72.5	70
123	100
145	150
170	200
245	300

* Based on 1% excitation current.

Line Charging Current Interrupting Capability **

Voltage (kV)	Amp	Miles
15.5 - 72.5	20	70
123	20	50
145	15	30
170	10	20

** Interrupting ratings may vary due to system and environmental conditions.

ADDITIONAL KEY FEATURES

- Spring loaded
- Heat-treated tapered stainless steel whip
- Universal mounting
- Long operating life
