Southern States Acquires Siemens Horizontal Interrupter Design Circuit Switchers Under Exclusive License

Now the Largest U.S. Supplier of Air Disconnect Switches adds SF₆ Power Transformer Protective Devices to our Expanding Line of Products.

Southern States, LLC, the 80-year leader in quality, service, and technical support proudly announces its acquisition under exclusive license agreement of the horizontal interrupter design circuit switchers of Siemens Energy and Automation. The addition of circuit switchers complements Southern States existing line of air disconnect switches, switch accessories, switch-fuse combinations, ground switches, high speed ground switches, and power fuses by adding three phase protective devices for substation power transformers. The horizontal interrupter circuit switchers are available with or without an integral vertical break disconnect. The Southern States type CSH is the non-blade model unit, while the Southern States type CSH-B is the integral vertical break blade model unit.

The circuit switchers will be produced at Southern States 160,000 square foot facility in Hampton, Georgia by Southern States Power Switching Division, a core group of production, engineering, and management personnel specifically selected to handle this product group and to bring the same high levels of quality and long life reliability to this product line that our customers have grown to expect from all Southern States products.

If you're looking for:

- Superior technical know-how
- Superior product performance and reliability
- An industry leading reputation for quality and service
- Experienced, local representation
- **Outright replacement of old circuit switchers from other manufacturers which are no longer parts supported**

Call the Service Division of Southern States and we'll take care of everything else.
