

SEGO[®]
Safety Enhanced
Gear Operator

Southern States SEGO[®], created for your substation safety.

Existing gear operators have been designed with the highest efficiency in mind, requiring minimal effort in operating a switch. This allows the possibility of a heavy switch to back-drive the gear operator, causing injury to people in close proximity of an out-of-control handle. For Southern States, safety is a top priority; that's why we have designed, tested, and manufactured the Safety Enhanced Gear Operator (SEGO), an innovative gear operator that performs a self-locking action in order to prevent back-driving of the handle.

FEATURES

- Adjustable stops from 90 degrees to 270 degrees
- Universal design fitting all operating requirements
- Completely sealed gearbox
- Open direction indicator with hasp for lock

SPECIFICATIONS

Maximum Output : 8000 in-lb

Ratio: 39:1

Available handle lengths:

10 inches

12 inches

15 inches
